

CLOUD AND DEVOPS INFRASTRUCTURE ENGINEER

SYNTHETIC / FICTIONAL JOB DESCRIPTION

ApexCloud Networks | Hyderabad / Remote | Full-Time | 1–4 Years

ABOUT THE ROLE

ApexCloud Networks is looking for an enthusiastic Cloud and DevOps Infrastructure Engineer to automate, scale, and secure our multi-region cloud infrastructure. You will manage automated deployment pipelines, maintain Kubernetes container clusters, and define infrastructure as code.

KEY RESPONSIBILITIES

- Automate cloud infrastructure provisioning using Terraform and AWS CloudFormation.
- Build, optimize, and maintain CI/CD pipelines using GitHub Actions, GitLab CI, and Jenkins.
- Deploy and manage containerized services using Docker and Kubernetes (EKS).
- Monitor system health, metrics, and logs using Prometheus, Grafana, and CloudWatch.
- Manage Linux server environments, security patching, and automated shell scripting (Bash, Python).
- Implement cloud security compliance, IAM policies, and disaster recovery procedures.

MINIMUM QUALIFICATIONS

- Bachelor's degree in Information Technology, Computer Science, or related engineering discipline.
- Hands-on experience with Amazon Web Services (AWS) core services (EC2, S3, VPC, IAM, RDS).
- Proficiency in containerization with Docker and container orchestration with Kubernetes.
- Strong Linux operating system administration and Bash / Shell scripting skills.
- Experience building automated CI/CD deployment pipelines.

PREFERRED QUALIFICATIONS

- Experience with Infrastructure as Code (IaC) using Terraform or Ansible.
- AWS Certified Solutions Architect or SysOps Administrator certification.
- Familiarity with networking protocols, DNS, SSL/TLS, reverse proxies (Nginx), and load balancers.
- Scripting proficiency in Python for infrastructure automation.

EQUAL OPPORTUNITY STATEMENT

ApexCloud Networks provides equal employment opportunities to all candidates regardless of race, background, or identity.
