

DATA ENGINEER - ETL AND PIPELINES

SYNTHETIC / FICTIONAL JOB DESCRIPTION

DataSphere Solutions | Bengaluru / Chennai | Full-Time | 1–3 Years

ABOUT THE ROLE

DataSphere Solutions is seeking an enthusiastic Data Engineer to build, automate, and optimize robust ETL pipelines and modern cloud data warehouses. You will partner with data scientists and business intelligence analysts to make clean, validated data accessible across our enterprise.

KEY RESPONSIBILITIES

- Design, build, and maintain automated ETL/ELT pipelines using Python, SQL, and Apache Airflow.
- Perform batch and streaming data transformations using Apache Spark and Pandas.
- Model and manage data schemas in relational databases (PostgreSQL) and cloud data warehouses (Snowflake, BigQuery).
- Implement data quality checks, validation rules, and schema drift monitoring.
- Optimize complex analytical SQL queries, indexes, and partitioning strategies.
- Collaborate with data scientists and analysts to support reporting, machine learning, and dashboarding needs.

MINIMUM QUALIFICATIONS

- Bachelor's degree in Computer Science, Information Systems, Data Engineering, or related discipline.
- Strong proficiency in Python and advanced analytical SQL.
- Hands-on experience designing and debugging ETL pipelines.
- Familiarity with relational databases (PostgreSQL, MySQL) and dimensional data modeling.
- Working knowledge of Git version control and Linux environments.

PREFERRED QUALIFICATIONS

- Experience with Apache Airflow for workflow orchestration and scheduling.
- Experience with distributed data processing using Apache Spark (PySpark).
- Familiarity with cloud data warehouses (Snowflake, Amazon Redshift, or Google BigQuery).
- Exposure to containerized pipeline deployments using Docker and AWS.

EQUAL OPPORTUNITY STATEMENT

DataSphere Solutions is an equal opportunity employer committed to celebrating diversity and inclusion.
